Wildlife Tracking Solutions

## Primary and Auxiliary Power Charging Collars

### Benefits:

**Extended Collar Lifespan** - Our unique power system combines solar panels with rechargeable batteries, backed by a primary battery that extends the collar lifespan and durability.

**Uninterrupted High-Resolution Data** - Supports continuous, high resolution GPS data collection and reporting.

**Reliable power back up** - with automatic seamless switch between power sources, if solar charging is limited, the collar runs uninterrupted on primary batteries with no data loss.

**Lighter smaller collars**- requires fewer primary cells as the solar component provides sufficient power inputs, we use 25% High-efficiency monocrystalline solar cells that ensure strong performance, even in low light conditions
